

SC Innovation Engineering Services

SC INNOVATION SERVICES | v1.0 | 09.2015

- SC Innovation has developed a core competency in designing and developing specialist vehicles and equipment that is in service worldwide. All projects are backed up by rigorous process and system engineering
- SC Innovation operate a complete engineering cycle from concept through to production and hence continuous development and through life support
- **Our Engineering services include:**
 - Design solid modelling, mechanical and electrical
 - Structural analysis in metallic and composite complex structures
 - Blast analysis
 - Multi-body dynamic simulation
 - Component optimisation
 - Sub system build and test
 - Full system prototype build
 - Full system verification and validation
 - Technical publications
 - Integrated logistic support
 - Series vehicle production
- **Our Innovation includes:**
 - Conceptual design embracing new and emerging technologies
 - Incorporation of new techniques and processes to improve performance and reduce cost
 - Continuous improvement of existing designs to meet changing requirements
 - Applying novel solutions to existing challenges
 - Technology transfer across sectors
